

SRLS -Safety reporting & Learning System

## Fostering a Safety Culture

### Reporting of Work Health and Safety Events (Employees)

### Reporting of Work Health and Safety Events (Visitors, Members of the Public)

The Safety Reporting and Learning System is a web-based tool used by staff across THOs and DHHS to report and learn from safety concerns in order to protect service users, the public and staff from unintended harm, damage or loss.

It helps staff, managers, and organisations efficiently collect and analyse information that can be used to reduce risk and improve the quality of care and services provided to the Tasmanian community.

Staff are encouraged to report all safety events that **ARISE** in their workplace – **A**lways **R**eport and **I**nvestigate **S**afety **E**vents!
